Remote evaporator may be added for three compartment configurations. See dealer for details.

A) Two equal temperature compartments.

B) Flexible center wall placement and optional three-compartment arrangement (dry, or cooled via remote evaporator).

The Vector™ 8611MT. Based upon the high performance Vector platform, the Vector 8611MT incorporates two evaporators into the main unit, enabling the trailer to be split into a center divide configuration without a remote evaporator.

Streamlined design. Eliminates check and solenoid valves resulting in fewer braze joints than competitive models. Other system advantages include independent air control, damperless defrost and consistent all-electric heating.

Ultra high efficiency. Delivers high airflow, fast pulldown and low fuel consumption.

Optimum flexibility. Rather than splitting the trailer into two virtually identical widths, the Vector 8611MT uniquely provides 15-inches of side-to-side center wall placement flexibility, enabling more efficient accommodation of pallets and up to 17 percent more cargo.
